The energy dilemma is here to stay

The F&B Market

Main Challenges

- 
- **Sustainable operations** (green image sells!!)
 - Carbon, Water and Waste footprint reduction
 - People Safety, Health and Development
 - **Food safety**
 - Responsibility and brand/image protection
 - Tightening regulations and increasing security issues
 - **Emerging Markets**
 - Increasing power of low/middle class people in emerging countries
 - New business model requirements
 - **Competitiveness**
 - Increasing prices of raw materials and commodities
 - Increasing power of retail
 - **Healthier Food**
 - Increasing demand for health, wellness, organic and ethical ingredients
 - Increasing demand for labelling and information

The F&B Market

Clear Sustainability focus

Green image sells! Ideal audience for Energy Management

(F&B is **Energy-CO₂ Sensitive** => impact on **top line**)

F&B is **Energy Intensive** => impact on **bottom line**)

Danone: “Far from contradictory, Nature and business can operate in synergy”

Between 2000 and 2010, Danone achieved a **42% reduction of energy used** per kg produced, **30% reduction of factory waste**, **41% reduction of water used** per kg produced

Coca-Cola aim to be the beverage industry leader in energy efficiency and climate protection

Coca-Cola’s goal is to **reduce GHG emissions by 5% by 2015** in manufacturing operations. Average megajoules/liter of product already improved by 13% between 2004 and 2009.

Mars HQ added 2MW Solar Garden

A **new solar installation** at the corporate headquarters of Mars Snackfood U.S. will provide up to 20% of the plant’s energy during peak operating hours.

Nestlé

Nestlé’s “eco-efficiency” aims at maximizing the production of goods while minimizing the consumption of resources

Global energy consumption per tonne of product was reduced and **energy use efficiency improved by 21%**. Emissions of CO₂ per tonne of product were reduced and eco-efficiency improved by 21%.

Unilever to halve its environmental footprint by 2020

By 2020, Unilever will **halve the environmental footprint of its products**, help more than 1 billion people take action to improve their health and well-being, and source 100% of our agricultural raw materials sustainably.

A Strategy around two main axis ?

Our sustainable development strategy

Responsibility and energetic environmental is central to the culture and strategy of Schneider Electric. Sustainable development is a real and essential opportunity for mobilization, growth and differentiation, and Schneider Electric agrees to provide innovative and effective responses to two key problems:

North, put on the market of products and solutions that lead to waste less energy, has produced in burning and in the best on clean air compliance

In the South, be an actor faces has the energy for 1.6 billion people currently without safe water and recycled, with electricity and economic development perenne.

A strategic focus: Better **management of energy** and the **environment**

EcoStruxure™: the right ecosystem to support the convergence of 5 key domains

Helping our customer to solve their Energy Equation
Making the energy Safe, Reliable, Efficient, Productive and Green

Our value proposition for F&B

Hungry for green efficiency ?

Sustainability

- Carbon, Water & Waste reduction
- Renewable Energy

Food Safety

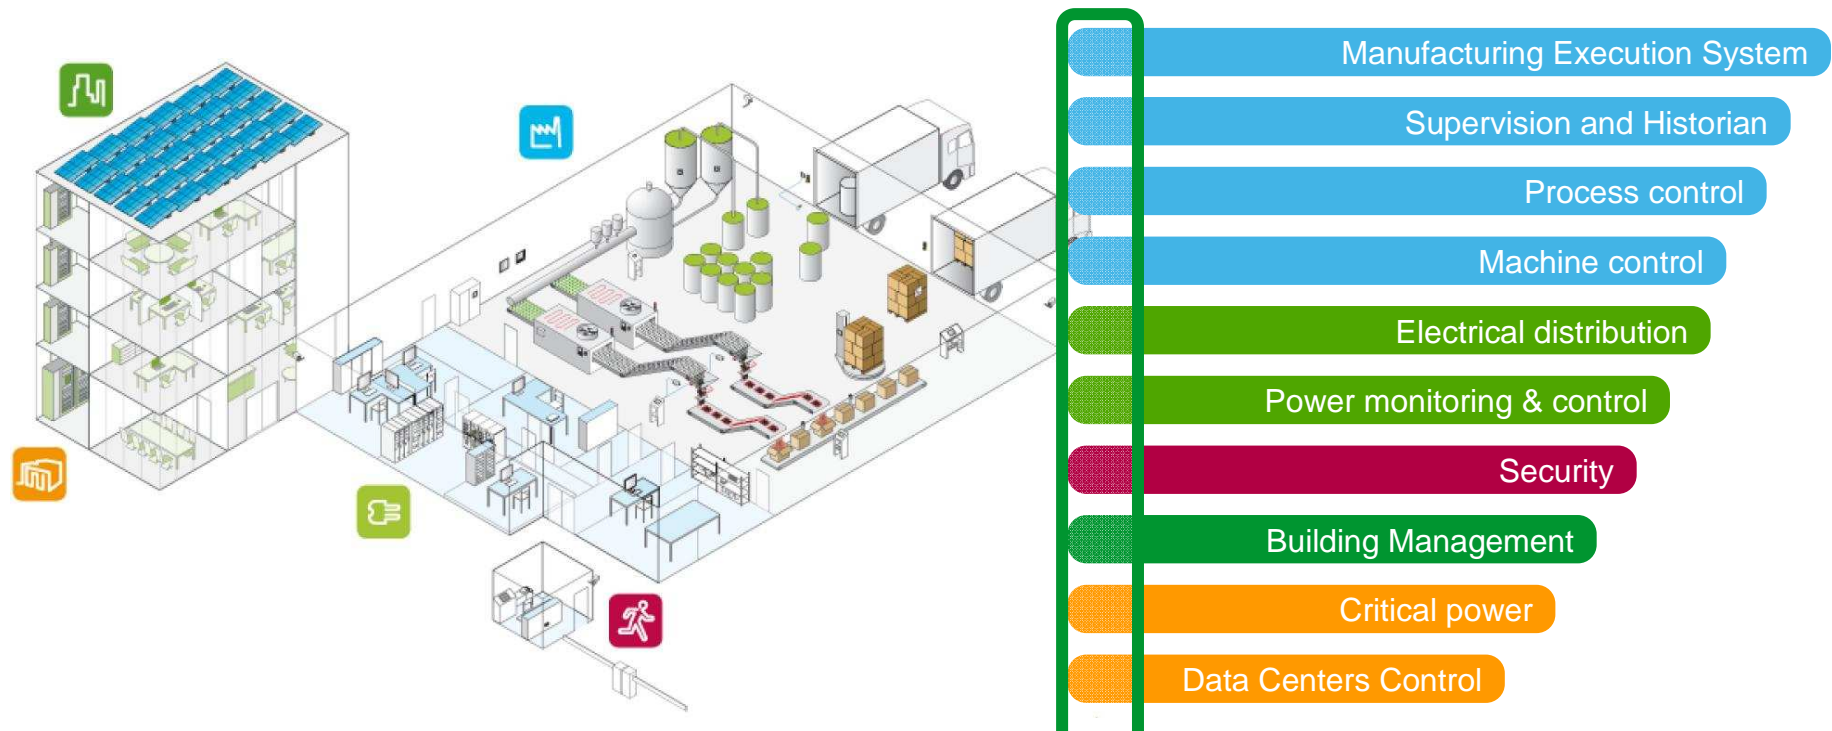

- Site security
- Traceability
- Genealogy

Competitiveness

- Capex & Opex
- Plant availability
- Productivity

Flexibility

- New Products
- New Packaging
- Flexible workshops

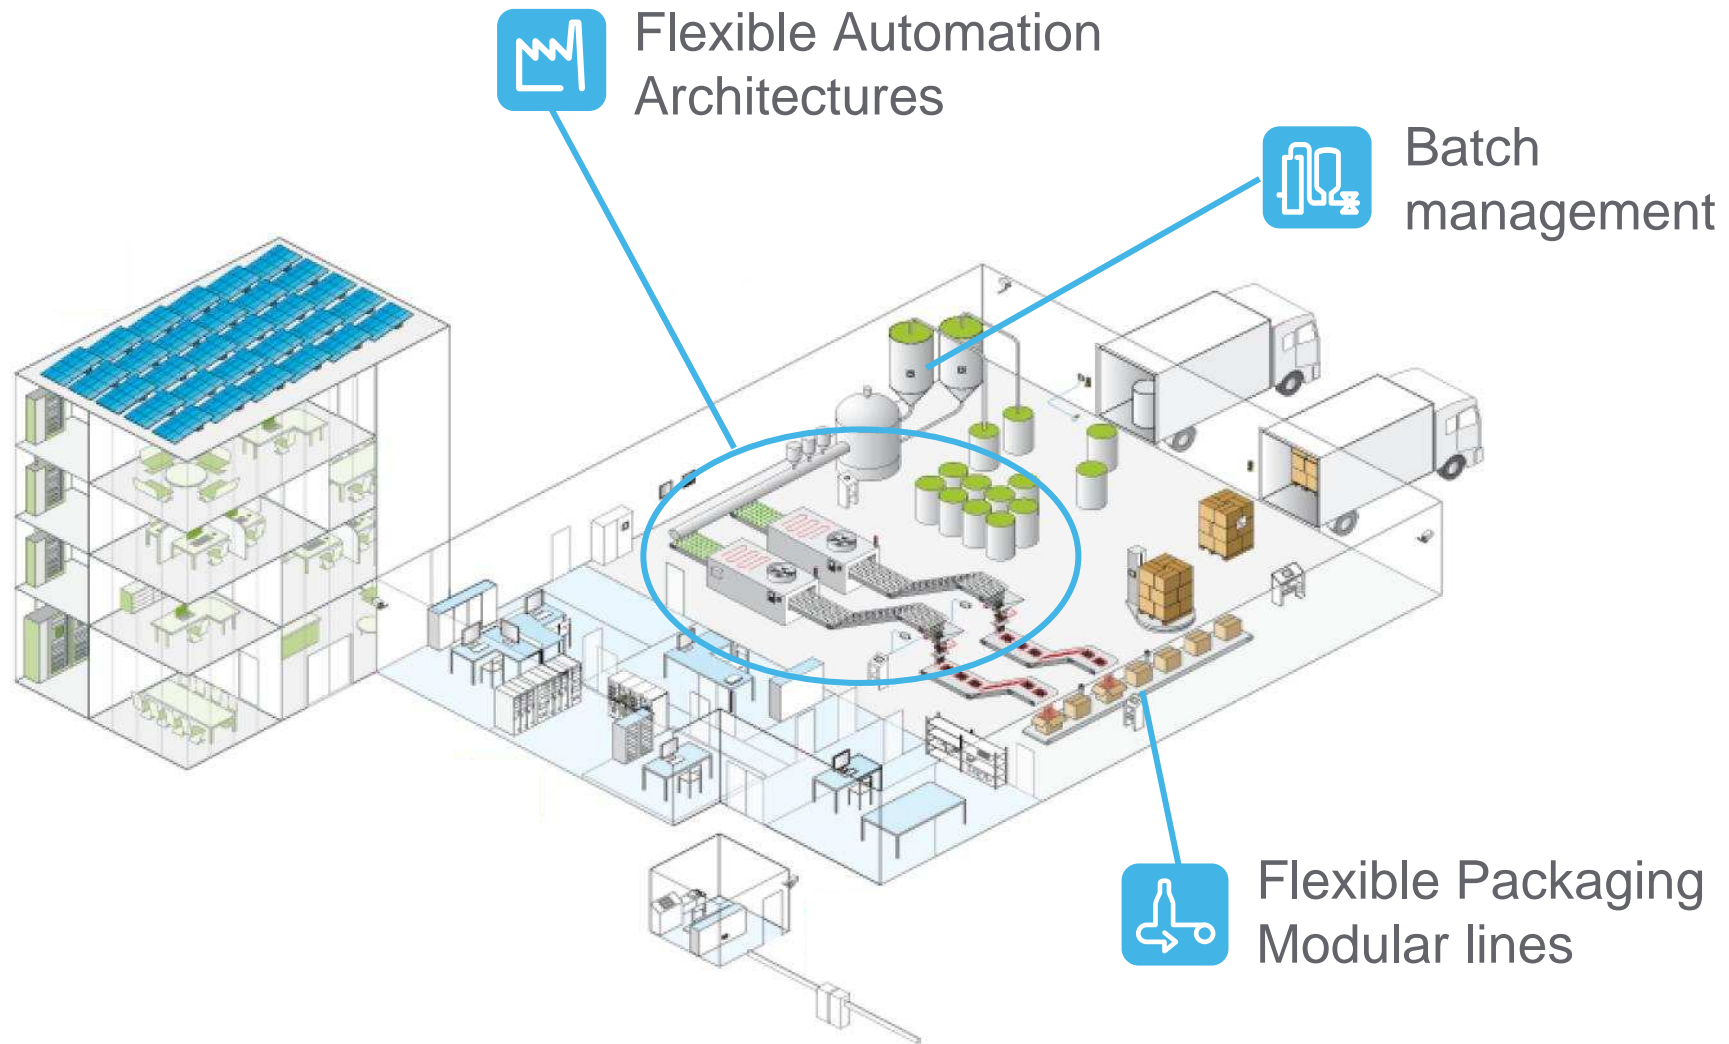

Based on **EcoStruxure™**

Simple Integration / Global Energy Management

Flexibility and Innovation

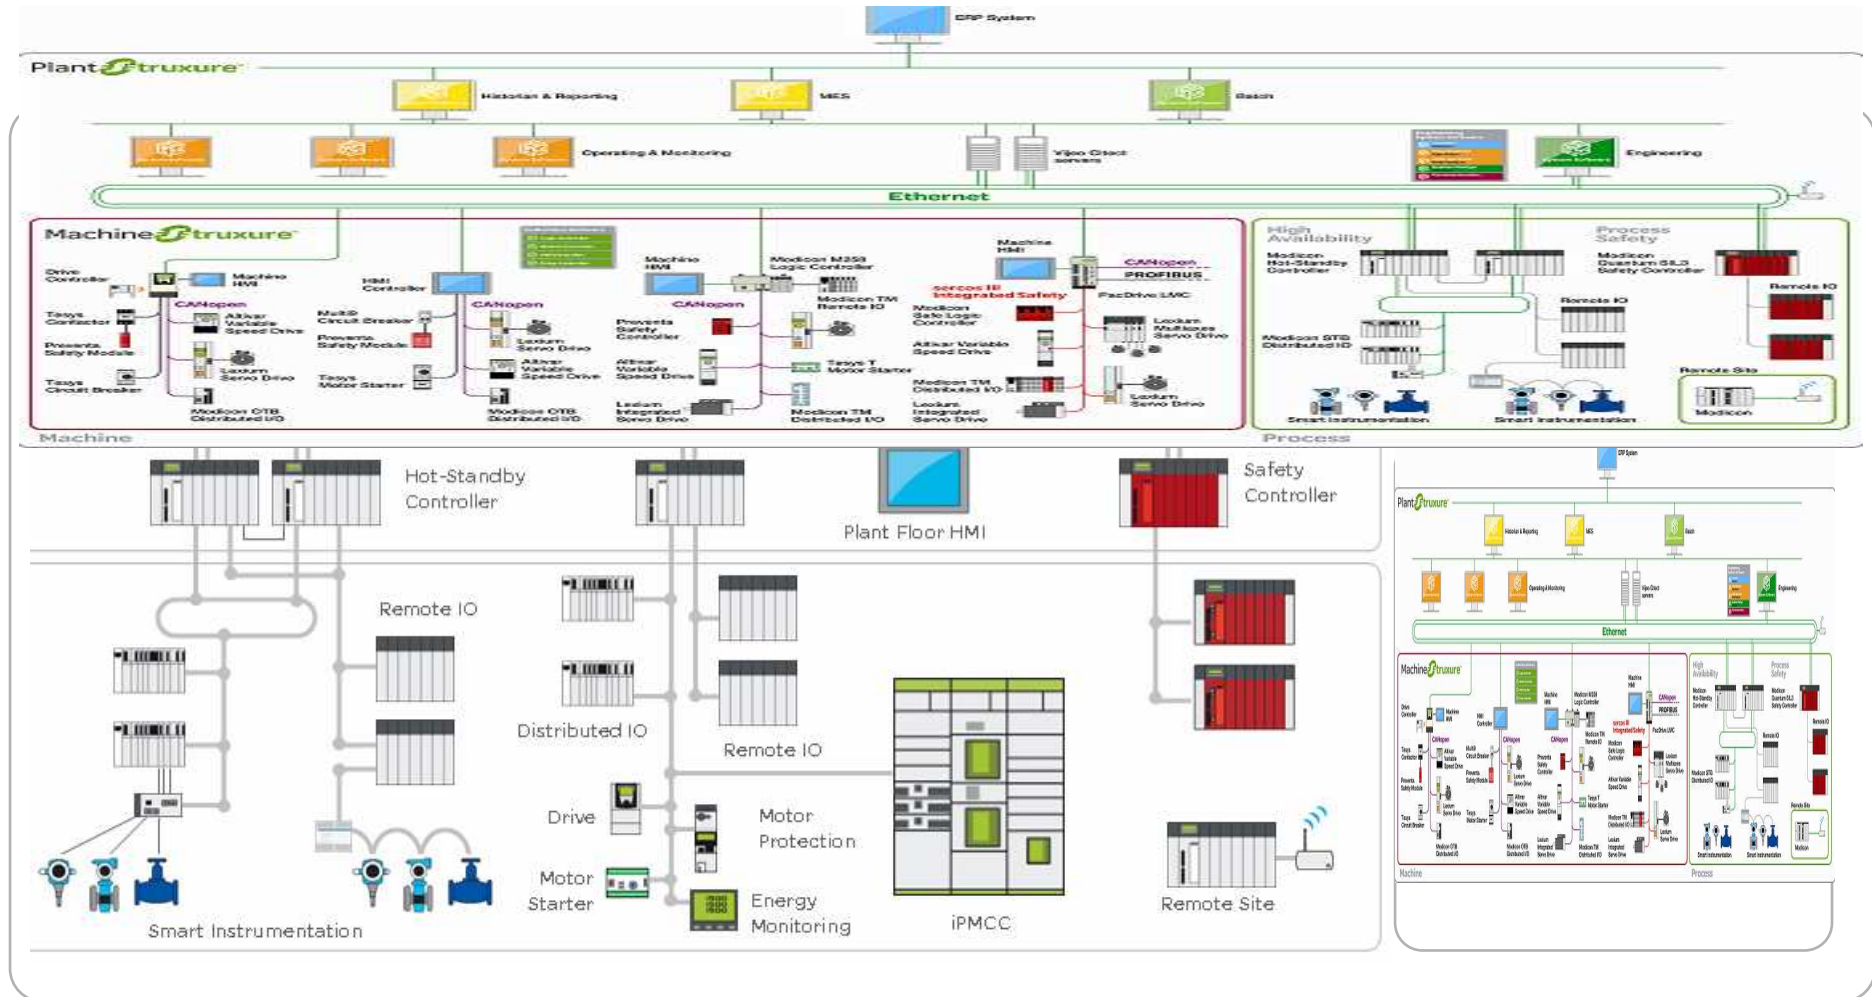

Flexible workshops, New Products, New Packaging

Flexible automation architectures

To meet your different process requirements

Process Automation System

More advanced operations with shorter time to market

➤ Tested Validated Documented

- Known functionalities & performance

➤ Simplified Engineering workflow

- Hardware independent development
- Highly flexible object model
- Multi-user

➤ Out-of-the-box functionalities

- Communication / Device integration
- Process control
- Energy Management

➤ Industry Specific components

- Liquid Food Library

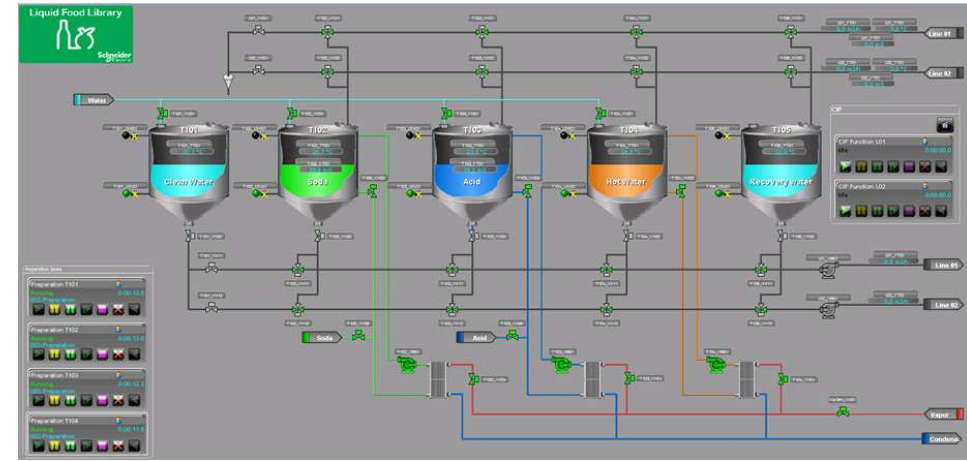

Libraries

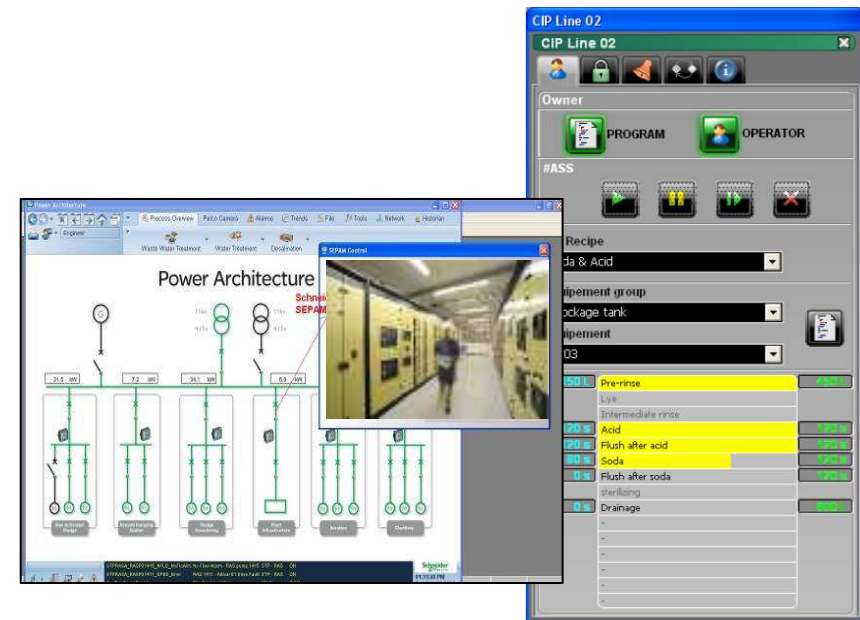

For both world power & automation but dedicated

- Motor starter
 - Tesys U & T
- Drives
 - ATV
- Power Meters
 - PM710 - 800
- Electrical Protection
 - Sepam20 - 40 – 80

- Continuous control
 - Level control
 - Flow control
 - Temperature control
- Motor and pump management
 - Start, stop, runtime, trip
- Valve control
 - On/off valves, control valve

Batch Management

To combine flexibility and safety

I need to produce a given quantity according to a new recipe

Mr Production

It is not possible to modify and test our application in such a short timeframe

Mr Automation

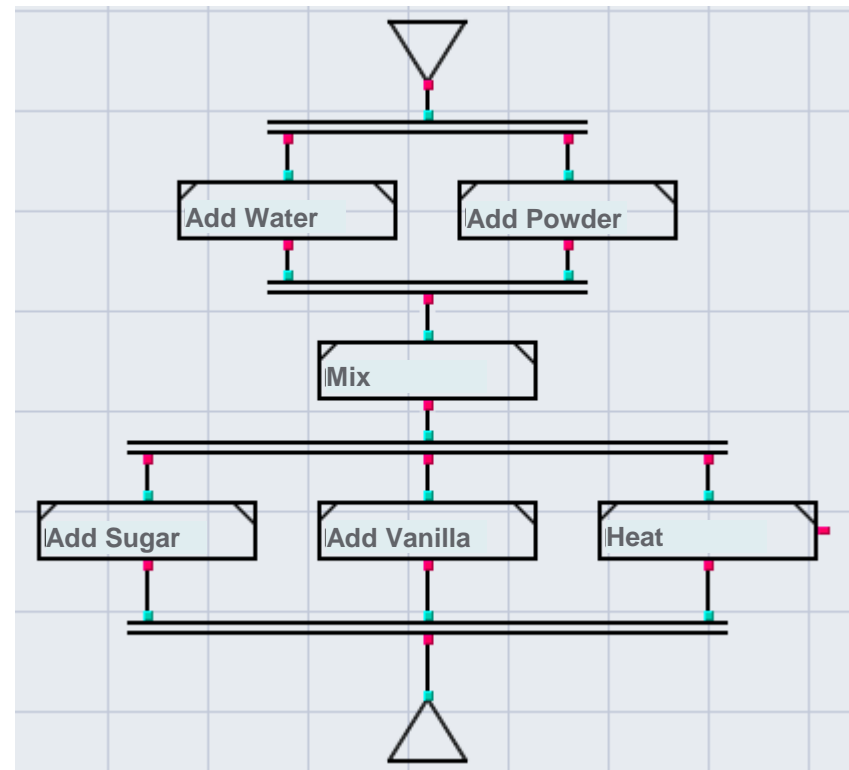

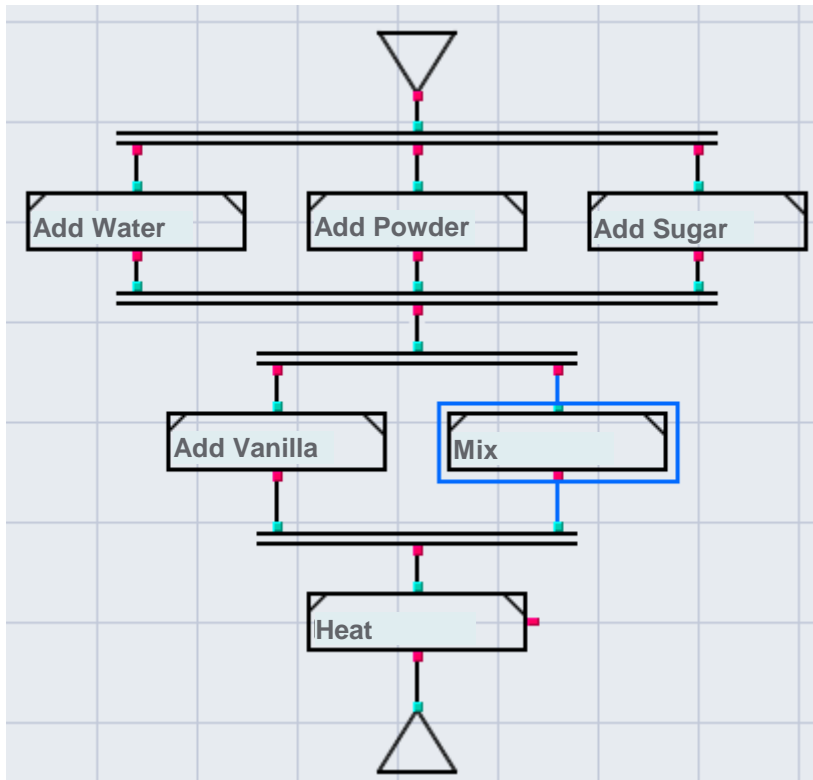

Batch Management

Independent Procedures based on ISA S88 model

I can define new product recipes with flexible procedures based on equipments behaviours

Mr Production

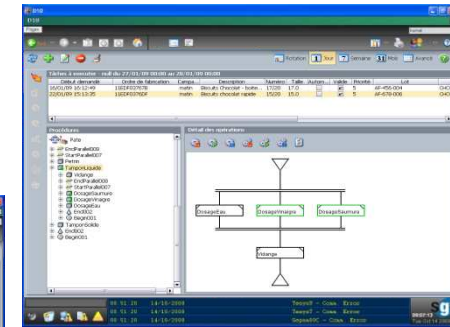

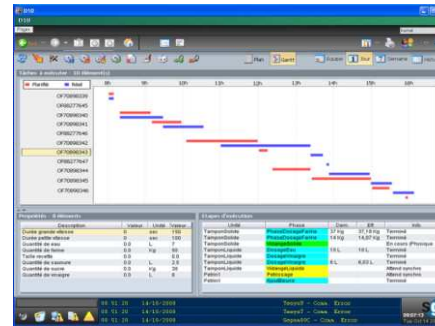

Batch Management

Interaction with ERP and system integration

- Flexible recipe edition
- Production plan download & scheduling
- Batch execution visibility
- Consistent batch reports
- Single equipment model

➤ Benefits:

- Reduce time to market.
- Increase product quality and consistency.
- Automate production recording and compliance.
- Maximize equipment usage.

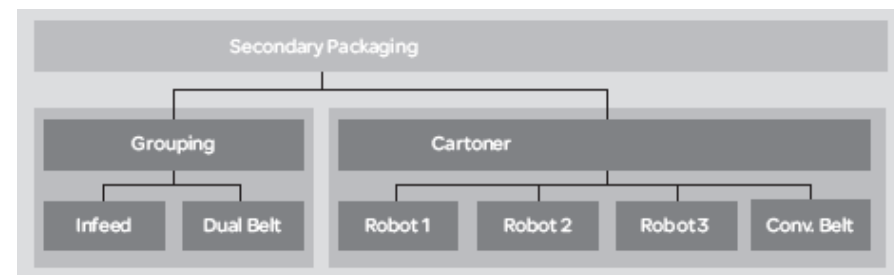

Flexible Packaging Automation

Because performance is not enough

- Flexible software instead of rigid mechanics
- Modular design for both hardware and software components
- Integration of robotic
- High performance

➤ Benefits:

- Lines are modular
- Add a line component in few hours
- Change packaging on the fly
- Increase your plant performance

Outstanding Machine Performances

Improved throughput

➤ PacDrive in some figures...

- Up to **99 servoaxis** synchronized
- **1 ms update rate** with
1 μ s synchronization

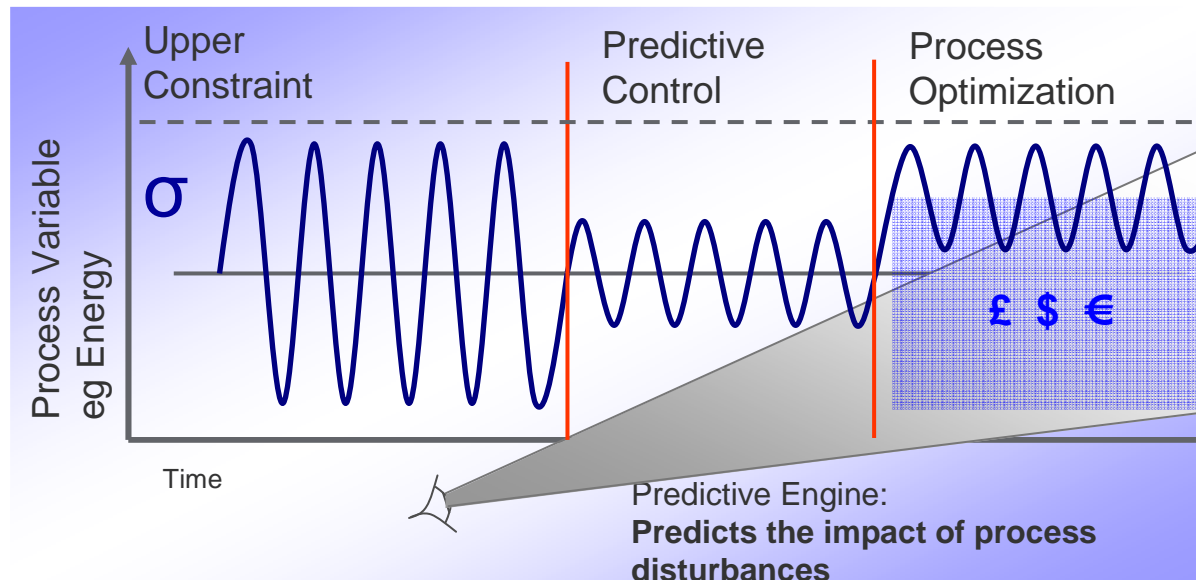

Advanced Process Control

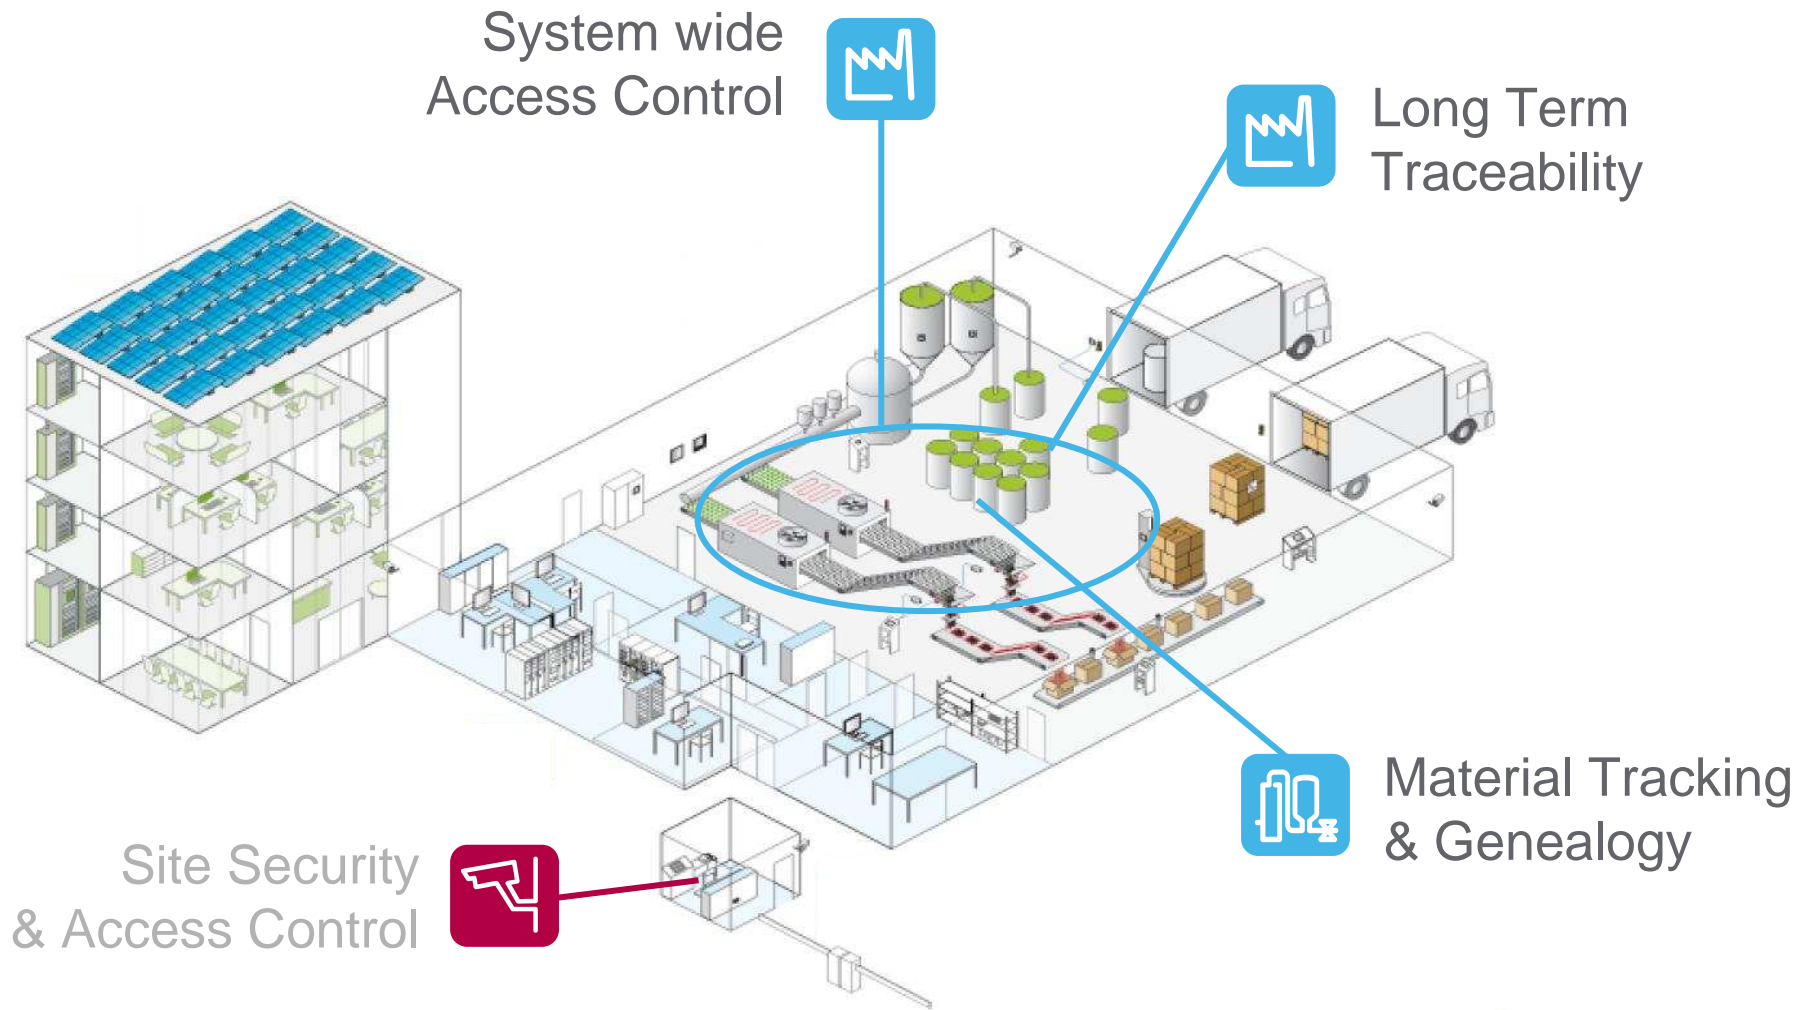

Make the most of complex processes

- Understand process constraints and complex process interactions
 - Predict impact of known disturbances on operation.
 - Predict, advise, make co-ordinated moves on **multiple** actuators.
 - Exploit **all** opportunities to push quality / throughput close to constraint.

Food Safety

Site security, Traceability

System Access Control

Users Authentication and Audit Trail

➤ Access control

➤ Badge

➤ Video

- Building
- Process
- ...

➤ User Authentication

➤ Benefits:

- Single environment
- Track operations
- Comply with 21CFR part 11

Material Tracking and Genealogy

Reduce impact from quality issues

- From raw material to end-product
- Ascendant and Descendant genealogy
- Real-time in progress inventory and genealogy

➤ Benefits:

- Improved quality assurance
- Eased compliance with new regulation

The screenshot displays a software interface for material tracking and genealogy. The main window is titled 'Le lot 200704191441 est issu des lots'. It features a table with columns for 'Lot', 'ID matière', 'Description', 'Qté', and 'Unité'. The table lists several lots, including '00001120962beba', '00001120962bec3', '00001120962bec5', '00001120962bec9', '000011222db2045', '200704191441', and '200704200936'. The '200704191441' lot is highlighted in yellow. Below the table, there is a section titled 'Informations sur le lot 200704191441' which provides details for the selected lot, including 'ID matière: Beurre', 'Description: Beurre doux', and 'Quantité: 8240 Kg'. The 'Propriétés du lot' section includes a table for 'Stockage du lot' with columns for 'Description', 'Valeur', 'Unité', 'Equipement', and 'Quantité'. The table lists properties such as 'Extrait sec', 'Matière grasse', 'Matière protéique', 'Épaississant', and 'Colorant E223'.

Production Energy Optimization

Reference architecture for Energy Management solutions

All solution offers intentionally use the **same** underlying components and reference architecture

Energy Management Services

Supply Side

Focus on Summit Energy

Supply services

Demand services

- Acquisition of Summit Energy Services Inc., providing expertise in energy procurement on supply and sustainability on demand
-

Data Operations

- Invoice collection
- Invoice Validation
- Utility bill management

Regulated Markets

- Tariff analysis
- Rate comparisons
- Utility negotiations
- Tax exemptions

Market Intelligence

- Regulatory assessments
- Market price tracking
- Industry trends
- Energy pricing
- Public utility commission updates

Sourcing

- Load profiling
- Energy contract optimization
- Supplier negotiations
- Market pricing analysis
- Supplier review
- Supply recommendations

Risk Management

- In-depth market analysis
- Strategic Risk Plan development
- Timely helping recommendations
- Detailed position reporting

Sustainability

- Roadmap planning
- Supply chain/ life cycle analysis
- Renewable/ clean energy
- Offset, credits, incentives
- Carbon price forecasts

Optimize your energy procurement policy

- Get exclusive recommendations from our specialists
- Identify the best suppliers and the best tariff
- Manage the risk and detect opportunities

Market Outlook

Due to the considerable upside price risks that exist, current prices should be viewed as a favorable opportunity.

Schneider Electric - Benjamin Jude - (EN)- April 2012

27

Track the performance of your Energy and Sustainability program...

- Communicate mission, goals & program achievements
- Aggregate emissions (scope 1,2 and 3), water, waste, etc. for the enterprise
- Access emission factor data and methodologies for verification
- Share key documents and information resources
- Report and manage status of projects with archives

The screenshot displays the 'Resource Advisor Enterprise' dashboard. At the top, there is a 'Resource Advisor' button and an 'Enterprise' label. The dashboard is divided into several sections:

- Sustainability Overview:** Features two line charts for 'Absolute' and 'Index' emissions (mton CO₂e) over time.
- Corporate Goals:** A central section with a target icon and text: 'ABC Company's sustainability mission is to promote conservation and operational efficiency throughout the organization to support strategic goals to reduce our energy, carbon, water and waste impacts. Engaging our employees to contribute to our collective efforts is critical to the success of the goals.' Below this are three goal categories:
 - Energy:** Reduce total energy usage by 15% from 2010 to 2012. 2010 to 2012.
 - Carbon:** Reduce carbon emissions by 12% from 2010 to 2012 (Aggregate) and by 5% per case produced over the same period (normalized).
 - Water:** Reduce wastewater generation by 2.3 M gallons per year through water conservation efforts; target zero discharge incidents across portfolio.
 - Waste:** Reduce waste generation by 2% (equivalent to 3.4 M tons) by focusing on supply chain light weighting and recycling of raw material packaging.
 - Renewable Energy:** Increase green energy portfolio by 5% per year with limit of 50% increase achieved via credit purchases; utilize diverse sources of clean generation.
- Top Sustainability Projects:** A table listing projects with columns for Project Title, Category, Target Completion, Savings, and Status.

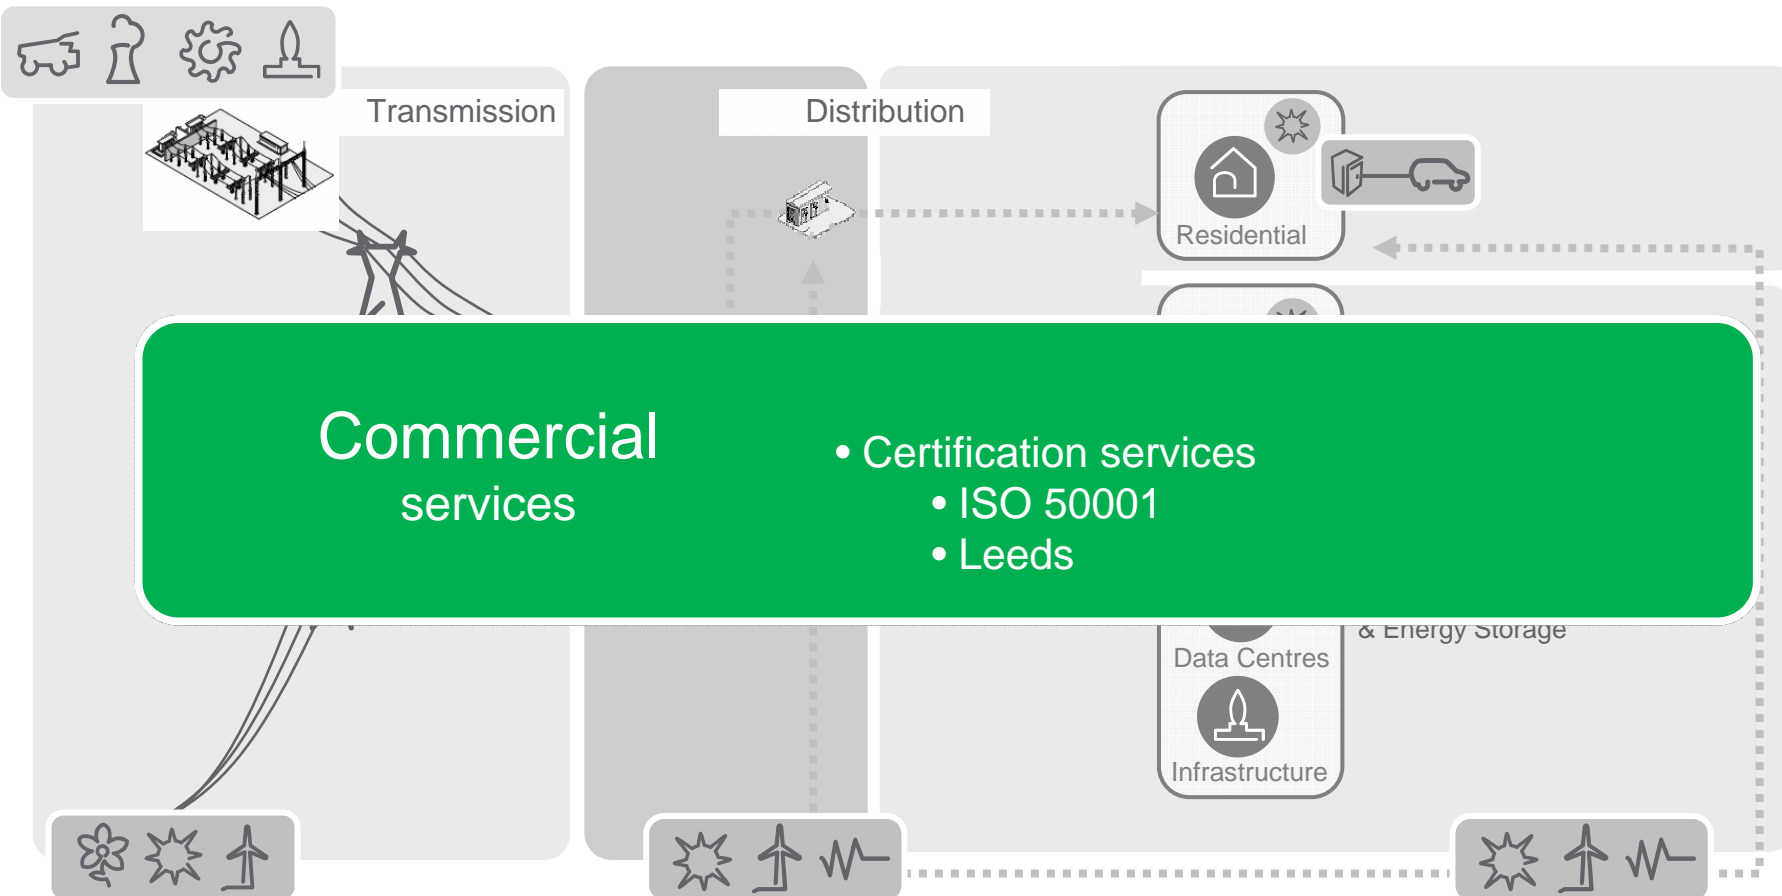

Project Title	Category	Target Completion	Savings	Status
Re-calibrate VAV boxes	HVAC	10/01/2011	\$22,123	🟢
Inspect and repair chilled water return valve mist	Over: HVAC Eq.	10/01/2011	\$850	🔴
Replace T-12 Lighting w/ T-8	Lighting	06/01/2011	\$10,000	🟡
Natural Gas Request for Proposal	RFP	01/01/2012	Request Quote	🟡
Motion Sensors for Lighting	Occupancy Sens.	01/01/2012	\$500	🟢
Install smaller chiller / return backup	HVAC	02/01/2012	\$8,050	🟡
- Other Sections:** 'Recommended Documents' (listing assessments and roadmaps), 'Detailed Overview' (recent news items), 'Highest Emitting Facilities' (table with columns for Site, Absolute, and Index), and 'Resources' (listing external links like EPA Climate Leaders).
- Right Sidebar:** 'Emission Profile' pie chart for 'Past 12 Months' showing Scope 1, 2, and 3 emissions. Below it is a 'Data Collection' table showing progress for various categories:

Category	Frequency	Progress
Natural Gas	monthly	95%
Heat	monthly	100%
Fuel Oil	monthly	35%
Diesel	monthly	35%
Coal	monthly	35%
Aviation	monthly	100%
Process	monthly	98%
Scope 2		
Electric Power	monthly	85%
Steam	monthly	55%
Scope 3		
Rental Car	monthly	80%
3rd Party Air Travel	monthly	80%

EcoStruxure - User Interface Designs

A real F&B Example

Clean-In-Place (CIP)

- An automatically operated cleaning system that delivers a number of wash and rinse cycles to the internal surfaces of processing equipment such as
 - tanks,
 - piping,
 - pasteurizers
 - filling machines,...

- Typical cleaning cycles in a CIP system for F&B processes consist of

- a water rinse
- a caustic wash
- a second water rinse
- an acid wash
- a third water rinse
- and often, a sanitizer rinse

Clean in Place (CIP)

- As it impacts **Quality** and **Safety** your production

The Clean in Place is the Heart of your F&B plant

- But at the same time :
 - It is a high **Energy** consumer (Steam, electricity)
 - It has high **Water**, **Chemical** and **Carbon footprint**
 - It has a negative impact on overall **Equipment Availability**

There something we can do optimize a CIP !!

CIP Process Automation

Four fundamental Parameters

Continuously verify the **4T** rule

● **Turbulence**

- Speed of cleaning products to generate needed turbulence in equipment (1.5m/s as a minimum)

● **Time**

- Duration of the cleaning cycles

● **Temperature**

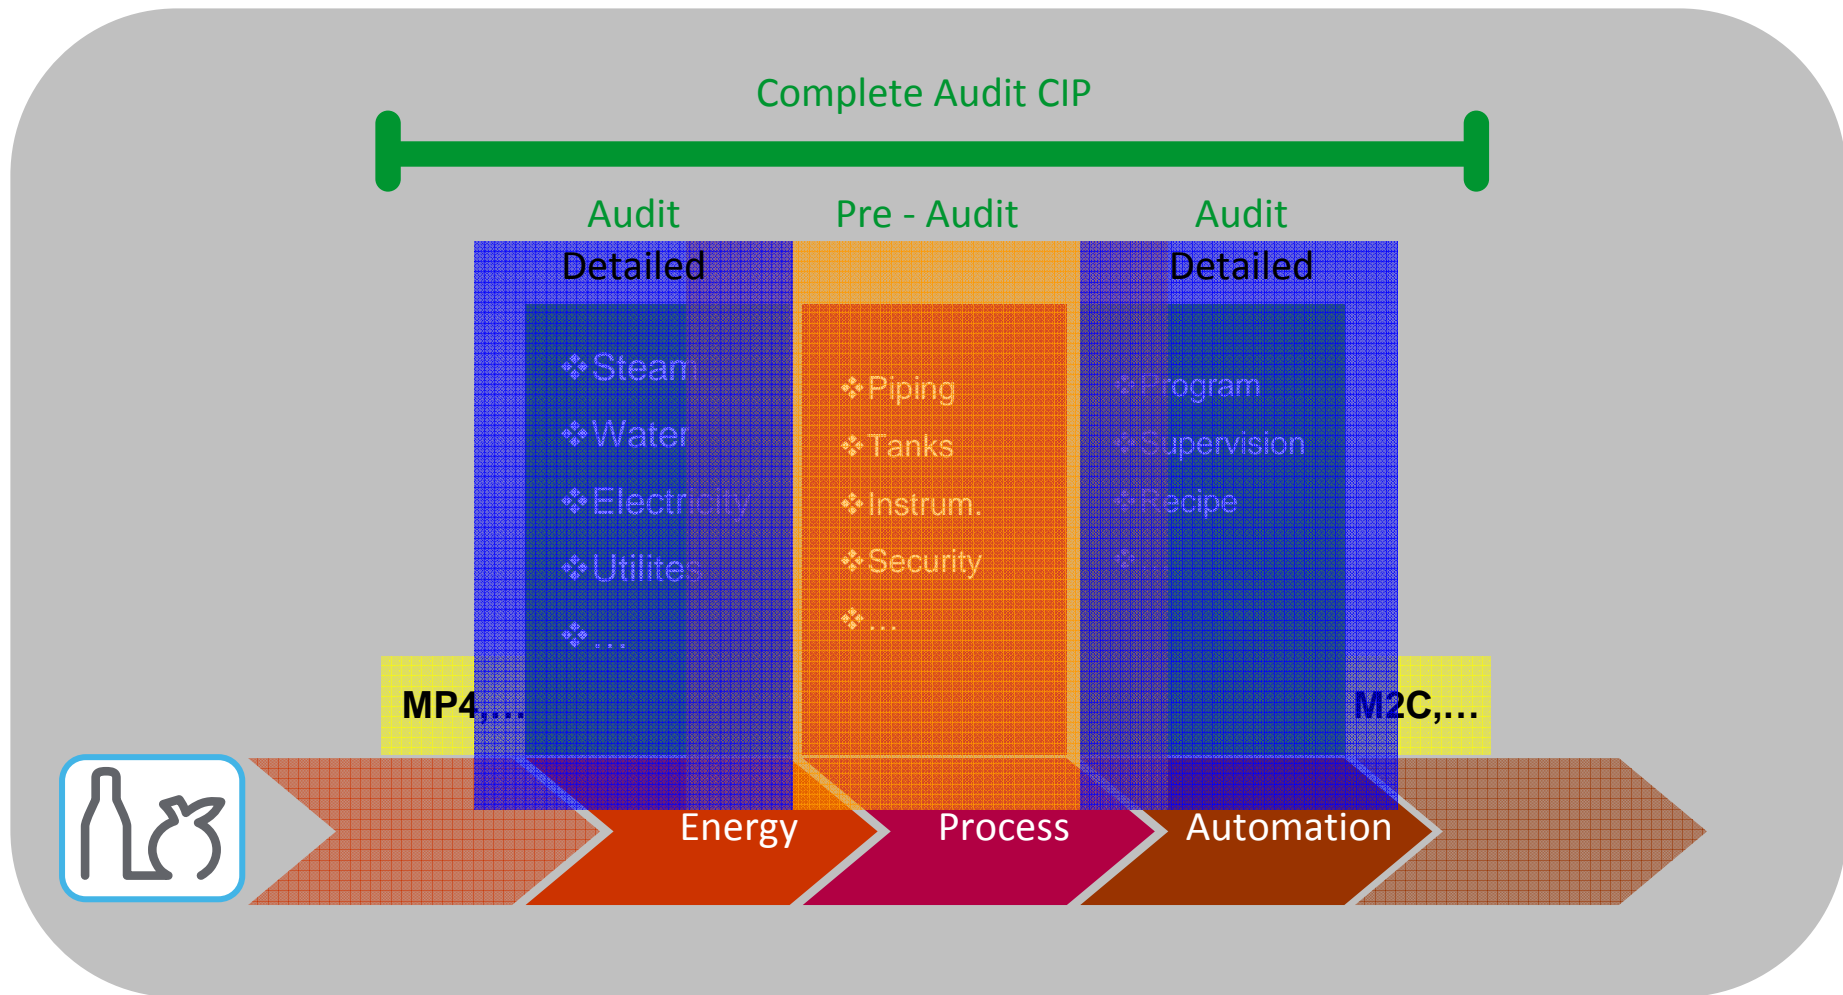

- Temperature of the cleaning products

● **Titer**

- Concentration of the cleaning products

Audit CIP - Principle

Why audit the CIP system?

- We have to heart to reduce your energy consumption at large (water, air, gas, electricity and steam) and reduce your environmental impact (CO2, chemicals, waste).
- The CIP is the heart of the process is the essential component of agro-food

NO CLEANING > NO PRODUCTION

- **A project that demonstrates the commitment of Schneider-Electric:**
 - Waste less > reduce consumption
 - Be more effective in doing the same with fewer resources,
 - Being a cleaner planet "greener".

Weaknesses of the CIP stations

- A station CIP well sized and instrumented, circuits wash properly calculated, good hydraulic design without too much loss, an automatic optimized for efficient cleaning, a good monitor for continuous improvement.

THIS IS VERY RARE

- We meet stations:
 - Consume plenty of water
 - Consume too much steam
 - Consume a lot of electricity
 - Consume too many chemicals
 - Time consuming to produce

Services

AUDIT

Our offer for CIP Optimization

- Reduction of Water consumption
- Reduction of chemical products consumption (e.g : acid – soda)
- Reduction of energies consumption (e.g : heating)
- Reduction of Carbon footprint

- **Optimize productivity** by reducing the length of the cleaning program (just enough), optimize CIP's lines availability

- **To summarize** : Produce more with less energy, be more green by using less chemical product. Reduce your Carbon and water footprint by optimizing your CIP.

- **And of course Guarantee food safety !!!**

Innovations

A New CIP Concept to be more Greener and Efficient

➤ Green CIP :

- Based on chemical regeneration (soda and acid)
- **Recover** (effluent), **Regenerate** (soda/acid), **Recycle** (reagents & “sludges”)

➤ 3 STEPS to be more green !

- Chemical solution recovery before drain
- Chemical regeneration to clean soda and acid solutions (Depollution)
- Chemical reuse for next cleaning programs

➤ Benefits

- **Water consumption reduction**
- **Chemical consumption reduction**
- Energy consumption reduction
- Productivity Improvement
- Sustainability, environmental footprint reduction
- Pollution tax reduction and CAPEX cut (waste treatment)

Treatment through a reagent

Green CIP Concept in Brief

- **Water** : No need to rinse first, you could start immediately with the chemical phase
 - Water consumption reduction
 - CIP duration reduction – productivity improvement
 - Improve your water footprint

- **Chemical** : Regeneration of soda & acid solutions
 - Reduce the chemical consumption
 - Save energies due to tank refilling and heat step
 - Improve your carbon & sustainable footprint

- **Waste water treatment plant impacts**
 - Treatment partially done before rejection
 - Save electricity due to effluents treatment
 - Avoid chemical rejection and Ph variation

- **Already some pilot & study projects ongoing**

Innovation in Sanitization

➤ How do you do your Sanitization ?

- By hot water or steam ? With a chemical solution ?

● Chemical

- Pro's : Very fast
- Con's : Must be followed by a rinse with sterile water, need to monitor chemical agent concentration, generate chemical waste to be treated

● Heat by hot water or steam

- Pro's : No need of additional rinse
- Con's : Time for heat treatment and equipment to cool down stress on equipment due to fast temperature changes, energy cost to produce steam/hot water

➤ We propose a bio solution usable at room temperature

- Reducing chemical waste, reducing electricity and steam consumption, reducing your carbon footprint, Improving your productivity

What is a Bio-Decontaminant ?

➤ In a few words :

- Solutions able to kill Microorganisms by modifying their **Electrical** environment
- Based on a vegetable combination (100% Bio)
- Useable for sanitation phase at room temperature instead of 95°C

➤ Replace your current sanitation phase with a bio decontamination phase

Bacterias :
Listeria innocua,
Salmonella Dublin,
Escherichia coli,
Bacillus subtilis,
Staphylococcus aureus,
Aspergillus niger,

Innovation in Emerging countries

Scope

- **Application**
 - Raw milk pre-cooling solution to minimize bacterial growth and maintain quality of raw milk (by reducing the raw milk temperature)
- **Lead Users**
 - Milk agent
 - BMC In charge
- **Customer problems**
 - Today it is taking 6 to 8 Hrs to cool raw milk at 25 – 27C to 4 C temperature. We need to reduce the cooling time
 - Prior to reaching the BMC station, the milk stays in 40 liters plastic cans for about 3-4 hours at environmental temperature.
 - The cans are transferred in vehicles which do not have any refrigeration units and are not insulated to maintain the temperature.
 - So, a significant amount of time lapses before the milk reaches the BMC.
 - This leads to bacterial growth in the raw milk.
 - ⇒ **This leads to deterioration of the milk quality which is not able to meet international standards.**

Because of the scarcity of power in village they are mostly run on generators which are highly expensive 2. it is about 25 3. 																				

Truck monitoring with GPS Modem

Milk reception & Schedule @ dairy plant

• Proposed offer

- Milk Truck Tracking : Service oriented solution designed for Tracking the Milk Truck from the Dairy Plant.
- Integrated solution with PlantStruxure
 - Link with Milk Reception Point to schedule receiving the Milk Tanks
 - Optimize the milk process with better predicted "Time & Quantity" of milk to be received
- GPS modem & Tracking web portal are the offer components

• Price:

- TBD

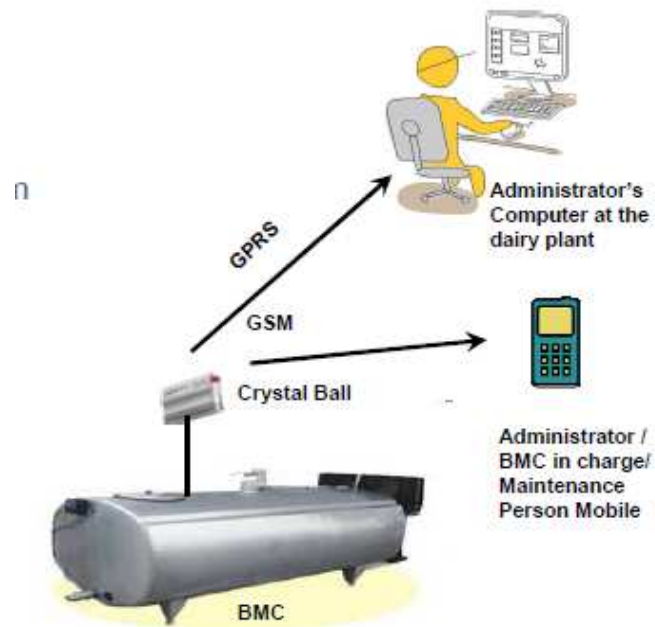

• Customer benefits

- Productivity & Process optimization
- Energy efficiency
- Improved milk quality with associated futuristic initiatives (ex: On-Truck milk processing when delayed on road)

Innovation in Brief

- BMC Remote monitoring

- QR Code on product

Questions ? / Answers

A close-up photograph of a young boy with dark hair and eyes, looking through a white cup. The cup is held up to his face, and he is looking directly at the camera. The background is blurred, showing what appears to be a chair and a wall. The text is overlaid on the image, following the curve of the cup's rim.

“Hungry for Green Efficiency” ?

Questions ?

Conclusion

Our greatest reward:
the satisfaction of our
F&Bev customers

A young boy with dark hair is looking through a glass pane. He is wearing a white face mask that covers his mouth and nose. The background is slightly blurred, showing what appears to be a kitchen or dining area. The text is overlaid on the image in a large, white, sans-serif font, slanted upwards from left to right.

Thank You!
Tack så mycket!
